

AGH UNIVERSITY OF SCIENCE AND TECHNOLOGY

Seminar in *Artificial Intelligence* Word embedding

Marcin Trebunia, Dominik Rygiel, Konrad Adamczyk

Department of Telecommunications

27.05.2019

Agenda

- Introduction
 - Why do we need word embedding
 - Types of encoding
 - General concept
- Word embedding models
 - GloVe
 - Word2Vec
 - fastext
- Applications
 - Natural Language Processing
 - Other domains
 - **Problems and limitations**

Introduction

What is word embedding?

Word embedding 3/32 Seminar

Introduction

Word embeddings are one of the few currently successful applications of unsupervised learning. Their main benefit arguably is that they don't require expensive annotation, but can be derived from large unannotated corpora that are readily available.

Pre-trained embeddings can then be used in downstream tasks that use small amounts of labeled data.

NLP Research Scientist, Sebastian Ruder

Seminar Word embedding 4/32

Introduction

What a **lovely** day. What a **nice** day.

Seminar Word embedding

Encoding text

• Machine learning models take vectors (arrays of numbers) as input.

•

Seminar Word embedding 6/32

One hot encoding

Seminar Word embedding 7/32

One hot encoding (cont.)

- Words completely independent of each other
- Inefficient approach: vector is sparse

Word embedding 8/32 Seminar

One hot encoding (cont.)

Example:

- Dictionary of 10,000 words
- One hot encode each word
- Each vector's elements are 99.99% zeros!

Seminar Word embedding

Unique number encoding

What
$$= [1]$$
 $a = [2]$
lovely $= [3]$
nice $= [4]$
day $= [5]$

Unique number encoding (cont.)

- + Efficient dense vector
- Encoding arbitrary does not catch relationships between words
- Can be challenging for a model to interpret

Seminar Word embedding 11/32

What =
$$\begin{bmatrix} 1.2 & -0.1 & 4.3 & 3.2 \end{bmatrix}$$

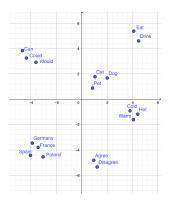

a = $\begin{bmatrix} 0.4 & 2.5 & -0.9 & 0.5 \end{bmatrix}$
lovely = $\begin{bmatrix} 2.1 & 0.3 & 0.1 & 0.4 \end{bmatrix}$
nice = $\begin{bmatrix} 2.0 & 0.4 & 0.3 & 0.5 \end{bmatrix}$
day = $\begin{bmatrix} 3.0 & -0.6 & 3.5 & -0.8 \end{bmatrix}$

- Words with similar context occupy close spatial positions
- The cosine of the angle between words' vectors should be close to 1 (angle close to 0)

Seminar Word embedding 13/32

Caption of the figure

Words are synonyms

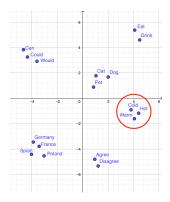

Words are antonyms

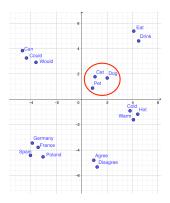

Slide with a Figure from a File

Words are value on a scale

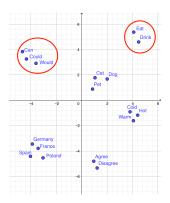

Words are hyponym - hypernym

Seminar Word embedding 18/32

Words appear in similar context

Seminar Word embedding 19/32

Word embedding models

Seminar Word embedding 20/32

GloVe

Seminar Word embedding 21/32

Word2Vec

Seminar Word embedding 22/32

fastext

Seminar Word embedding 23/32

How can we use it?

Seminar Word embedding 24/32

Natural Language Processing

- If user search for "Dell notebook battery size" we would like to match it also with "Dell laptop battery capacity"
- If user search for "Cracow Motel" we would like to match it also with "Krakow Hotel"

Seminar Word embedding 25/32

Natural Language Processing

- Analyzing survey responses
- Analyzing comments

Seminar Word embedding 26/32

Other domains

- Word2vec can catch relationships and contexts in songs the user listens to
- Data can be used for real-time music recommendation

Seminar Word embedding 27/32

Problems and limitations

- Multiple meanings of a word: solution Sense embeddings
- Inability to handle unknown or out-of-vocabulary (OOV) words
- Scaling to new languages
- No shared representations at sub-word levels

Seminar Word embedding 28/32

Thank you for your attention!

Seminar Word embedding 29/32

Q & A
